PROFESSIONAL SUMMARY

Third-year B.Tech Cyber Security student focused on SOC and Blue Team operations, Cloud Security, Cyber Investigation, and Digital Forensics. Hands-on project experience in AWS Cloud Security, security monitoring, DevSecOps, Linux and network security, and machine learning-based fraud detection. Practical exposure to AWS services (IAM, EC2, S3, CloudTrail), SIEM and monitoring tools, Linux/networking, and DevSecOps pipelines through applied projects. Seeking SOC Analyst, Blue Team, or Cloud Security internship opportunities to apply security monitoring, incident response, and cloud security skills.

TECHNICAL SKILLS

Cybersecurity: SOC & Blue Team, Security Monitoring, Incident Response, Alert Triage, Information Security Engineering, Ethical Hacking, Computer Forensics

Cloud Security: AWS, IAM, AWS CloudTrail, Amazon S3, Amazon EC2, AWS CLI, Security Groups, RBAC

Networking & Linux: Linux, Kali Linux, TCP/IP, Network Security, Nmap, Wireshark

SOC / Security Tools: Splunk, Wazuh, Wireshark, Nmap

DevSecOps: Docker, Trivy, GitHub, CI/CD, Version Control

Programming: Python, C++, C, Java, C#, JavaScript, SQL

Web & Backend: HTML, CSS, React.js, Node.js, MongoDB, Flask

Data & AI: Pandas, Machine Learning, Data Analysis

PROJECTS

CloudShield | AWS, IAM, S3, EC2, AWS CLI

- Built an AWS cloud security project covering IAM policy configuration, secure resource setup, and encryption best practices.
- Configured S3 and EC2 resources following least-privilege access principles using the AWS CLI.

AWS Cloud Security Monitoring and Alerting System | AWS CloudTrail, EC2, IAM, Security Groups, Amazon SNS, Linux

- Developed an AWS activity monitoring project using CloudTrail for security visibility across EC2, IAM, and Security Groups.
- Implemented alerting with Amazon SNS on a Linux-based setup to flag suspicious cloud activity.

DevSecOps Secure CI/CD Pipeline with Trivy Scanning | GitHub, Docker, Trivy, CI/CD, Flask

- Built a CI/CD pipeline integrating Trivy container security scanning for a Flask application.
- Automated Docker image builds and vulnerability scanning through a GitHub-based CI/CD workflow.

NetSentinel | Linux, Bash, Nmap, Networking

- Developed a Linux-based network security monitoring tool for system auditing and network scanning using Nmap.
- Performed exposure analysis, log analysis, and risk identification through Bash scripting.

Credit Card Fraud Detection | Python, Pandas, Machine Learning, Data Analysis

- Built a machine learning project to detect potentially fraudulent credit card transactions using Python and Pandas.
- Performed data analysis and feature exploration to support fraud detection modeling.

CERTIFICATIONS & ACHIEVEMENTS

Certifications

Cybersecurity Fundamentals — IBM SkillsBuild

Advent of Cyber 2025 — TryHackMe (Certificate of Completion)

CTF & Participation

Love at First Breach – CTF — TryHackMe (Completion)

The Cold Start – CTF — TryHackMe (Participation)

Hacker Holidays — TryHackMe (Participation)

EDUCATION

B.Tech — Cyber Security | 3rd Year

Siddhartha Institute of Technology & Sciences, Hyderabad, Telangana, India

CAREER INTERESTS

SOC Analyst | Blue Team | Cloud Security | Cybersecurity | Cyber Investigation | Digital Forensics
